Volume. Quantities of liquids are measured in units of volume. These include the SI unit cubic metre (m^3) and its divisions, in particular the cubic decimeter, more commonly called the litre ($1 \text{ dm}^3 = 1 \text{ L} = 0.001 \text{ m}^3$), and the cubic centimetre, also called millilitre ($1 \text{ cm}^3 = 1 \text{ mL} = 0.001 \text{ L} = 10^{-6} \text{ m}^3$). The volume of a quantity of liquid is fixed by its temperature and pressure.

A chemical element is a species of atom having the same number of protons in their atomic nuclei (that is, the same atomic number, or Z). For example, the atomic number of oxygen is 8, so the element oxygen consists of all atoms which have exactly 8 protons. 118 elements have been identified, of which the first 94 occur naturally on Earth with the remaining 24 being synthetic elements.
