An excellent reference for the classical treatment of differential geometry is the book by Struik [2]. The more descriptive guide by Hilbert and Cohn-Vossen [1] is also highly recommended. This book covers both geometry and differential geometry essentially without the use of calculus. It contains many interesting results and

Lectures On Classical Differential Geometry Second Edition

Differential geometry is a mathematical discipline that uses the techniques of differential calculus, integral calculus, linear algebra and multilinear algebra to study problems in geometry. The theory of plane and space curves and surfaces in the three-dimensional Euclidean space formed the basis for development of differential geometry during the 18th century and the 19th century.
