Fit-for-purpose high temperature coating solutions High-temperature-resistant coatings are designed to withstand temperatures ranging from 150°C (300°F) to over 760°C (1,400°F) while providing protection against corrosion.

## **High-Temperature-Resistant Coatings | PPG Protective**

High-temperature coatings are used extensively to protect the alloys from oxidation, corrosion, heat, and other processes of degradation. Solid-solution strengthening and precipitation hardening are effective at high temperatures and, therefore, are used in strengthening high-temperature alloys.

several high temperature projects constructed in the remote and harsh environments. 1. INTRODUCTION High performance pipeline corrosion protection coatings have been developed to meet the demanding requirements of current pipeline engineers. A variety of pipeline-coating technologies are available, and selection has evolved along geographical lines.

This book assesses the state of the art of coatings materials and processes for gas-turbine blades and vanes, determines potential applications of coatings in high-temperature environments, identifies needs for improved coatings in terms of performance enhancements, design considerations, and fabrication processes, assesses durability of advanced coating systems in expected service environments, and discusses the required inspection, repair, and maintenance methods.

A single component, high temperature coating based on a moisture-curing silicone binder, Intertherm 50 is ideal for the protection of steel from corrosion at temperatures up to 540°C (1004°F). The moisture-curing crosslinking technology of Intertherm 50 allows multiple coats to be applied without heat curing.
