Informal definition using a Turing machine as example. In the following, Marvin Minsky defines the numbers to be computed in a manner similar to those defined by Alan Turing in 1936; i.e., as "sequences of digits interpreted as decimal fractions" between 0 and 1: "A computable number [is] one for which there is a Turing machine which, given n on its initial tape, terminates with the n th digit ...

In formal language theory, a grammar (when the context is not given, often called a formal grammar for clarity) is a set of production rules for strings in a formal language. The rules describe how to form strings from the language's alphabet that are valid according to the language's syntax. A grammar does not describe the meaning of the strings or what can be done with them in whatever context ...

Why Philosophers Should Care About Computational Complexity

Turing Machines and Computability The question Hilbert raised was whether there could be a general method or process by which one could decide whether a mathematical proposition could be proved.

CTY $\hat{\epsilon}$ ™s mathematics, science, and computer science courses are dedicated to Dr. Richard P. Longaker, Provost of Johns Hopkins University from 1979 to 1987, in recognition of his advocacy and guidance through CTY $\hat{\epsilon}$ ™s initial years. Mathematics can be described as a language, a tool, a science, and an ...
