In physics, electromagnetic radiation (EM radiation or EMR) refers to the waves (or their quanta, photons) of the electromagnetic field, propagating (radiating) through space, carrying electromagnetic radiant energy. It includes radio waves, microwaves, infrared, (visible) light, ultraviolet, X-rays, and gamma rays.. Classically, electromagnetic radiation consists of electromagnetic waves ...

An electromagnetic field (also EMF or EM field) is a physical field produced by electrically charged objects. It affects the behavior of charged objects in the vicinity of the field. The electromagnetic field extends indefinitely throughout space and describes the electromagnetic interaction. It is one of the four fundamental forces of nature (the others are gravitation, weak interaction and ...

SWRA046A 4 ISM-Band and Short Range Device Antennas In the radiating near field the radiated field predominates, the antenna impedance is only slightly influenced by the surrounding media in this region. But the dimensions of the antenna can not be neglected with respect to the distance from the antenna.

makes it hard to obtain useful energy directly from it. The field needs to be structured before energy can be drawn from it. One way to do this is to align the field with an event which causes coherent waves of energy
