Introduction to Programming Using Java

Java is a general-purpose computer-programming language that is concurrent, class-based, object-oriented, and specifically designed to have as few implementation dependencies as possible. It is intended to let application developers "write once, run anywhere" (WORA), meaning that compiled Java code can run on all

platforms that support Java without the need for recompilation.

OOP: Introduction 18 Structuring by Program or Data? • What are the actions of the program vs. which data does the program act on. • Top-down: Stepwise program refinement • Bottom-up: Focus on the stable data parts then add methods • Object-oriented programming is bottom-up. Programs are structure with outset in the data. C and Pascal programs are typically implemented in a more top-down

Introduction to Java threads - Java programming source code

One of the primary goals of this Java book is to prepare students for the AP test. Another is to prepare for competition...and in the process, learn Java. Over the years, I have seen such competition make a significant difference in the lives of many students. If a teacher is not gentle in this approach to competition you can easily "burn-out" students....especially if you continually bombard ...
