An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation.. An artificial neuron mimics the working of a biophysical neuron with inputs and outputs, but is not a biological neuron model.

Editorial. Interactive Interventions. Writers in journals, presenters at conferences, and consultants at client meetings keep repeating the same mantra: Training is out; performance is in. As I indicated in last month's opening piece, this is the basic prescription from human performance technology (HPT): Analyze the situation to discover the root cause of the performance problem.
