Validity: The ability of a test to measure what it is intended to measure. If it is designed to measure intelligence, it measures intelligence and not cultural knowledge, problem solving, basic knowledge, logic, etc. If a test is designed to measure honesty, it should measure honesty, and not social desirability.

is consistent but always 15 minutes late would still be reliable in a measurement context. Stated in extreme terms, reliability in measurement actually could have nothing to do with accuracy in measurement, because reliability relates only to consistency. Without some degree of consistency, the issue of accuracy may not be germane.

A Study of Its Nature and Measurement." Research Interest It is against this backdrop that my research interest has taken shape. My research interest entails the exploration of postautonomous levels of human development. This exploration involved conducting a phenomenological-qualitative study of "high-end" individuals.
