In quantum mechanics, then, knowledge about the current dynamical state of a system is embodied in a set of quantum amplitudes. In classical physics, by contrast, we can state with certainty which value we will measure, and we characterise the system's current dynamical state by simply giving this value.

Preliminaries 7 for  $q$  is the charge of a point-like object in motion at velocity  $\vec{v}$  in a magnetic field  $\vec{B}$ , and  $\vec{F}$  is the resulting force acting on the particle. We have to learn that the  $\vec{A}$  symbol is the cross product of  $\vec{v}$  and  $\vec{B}$  (to most students at any rate, at least at first).

It is written at a level which presumes a prior full year's course in classical physics, and a knowledge of elementary differential and integral calculus. The material discussed here includes probability, relativity, quantum mechanics, atomic physics, statistical mechanics, nuclear physics and elementary particles.

1.4 Unit Systems. There are many unit systems in use today. Physicists, for example, use 4 main sets of units: SI units, c.g.s units, imperial units and natural units. Depending on where you are in the world or what area of physics you work in, the units will be different.

This work reviews the physics, consisting mostly of fluid mechanics phenomena, that applies to sailing yachts and influences the design of modern sailing vessels, such as those to be raced in the 33rd America's Cup regatta. In section II, the forces that act on a sailing yacht are introduced and discussed.

If you understand standing waves you can understand the physics of musical instruments. We will investigate three classes of instruments: Chordophones (strings) Aerophones (open and closed pipes) Idiophones (vibrating rigid bars and pipes) Most musical instruments will fit into these three categories.

In this chapter we give a very basic introduction to the physics of PET imaging. Several textbooks provide a more in-depth treatment [1-3]. 1. Radioactive Decay - General Principles Radioactive isotopes are atoms whose inner core, their nucleus, is unstable, i.e. in a state with too much energy.
