2 Research involving laboratory animals is important to people and to our quality of life. In the past century, most inhabitants of this planet have experienced an unprecedented rise in living standards, life expectancy and personal

Animals in Research - Society of Toxicology

Allometry is the study of the relationship of body size to shape, anatomy, physiology and finally behaviour, first outlined by Otto Snell in 1892, by D'Arcy Thompson in 1917 in *On Growth and Form* and by Julian Huxley in 1932.

Allometry - Wikipedia

Definition. Introgression or introgressive hybridization is the incorporation (usually via hybridization and backcrossing) of alleles from one entity (species) into the gene pool of a second, divergent entity (species).. Source of variation. Introgression is an important source of genetic variation in natural populations and may contribute to adaptation and even adaptive radiation.

Introgression - Wikipedia

Variation and Disease. A major focus of our lab is understanding the effects of genetic variation on molecular phenotypes and human disease. We develop methods for integrating diverse functional genomic datasets of transcription, chromatin modifications, regulator binding, and their changes across multiple conditions to interpret genetic associations, identify causal variants, and predict the ...

Worksheets and resources to support teaching and learning about plants at KS1 and KS2.

Plants - First School Years

Overview: Students learn how artificial selection can be used to develop new dog breeds with characteristics that make the dogs capable of performing a desirable task. Students begin by examining canine features and their functions. They are then given a scenario that describes the type of task they need a new breed of dog to perform.

Color Variation Over Time in Rock Pocket Mouse Populations

Blood Glucose Homeostasis Glucose is the transport carbohydrate in animals, and its concentration in the blood affects every cell in the body. Its concentration is therefore strictly controlled within the range 0.8 – 1g per dm³ of blood, and very low levels (hypoglycaemia) or very high levels (hyperglycaemia) are both serious and can lead to death.

The gray fox is easily distinguishable from the red fox in that they have a mane of short, stiff black hairs along the back leading to a black-tipped tail. Coloration of their upper-parts appears grizzled as a result of multi-colored guard hairs. The remainder of their pelage is usually a variation ...
