PrimeTime Timing Models Support Quick Timing Model (QTM) Extracted Timing Model (ETM) Interface Logic Model (ILM) Stamp Model PrimeTime offers the following timing models to address STA needs for IP, large hierarchical designs, and custom design:

### **Towards Automation of Timing-Model Derivation**

In this paper, we propose a model-derivation framework for timing analysis of Java software systems. The framework derives a bytecode control-flow model from the source code and subsequently applies a group of transformations to this model to obtain a timed-automata model. Basically, a single Java class is transformed into a single UPPAAL template.

### **A Model-Derivation Framework for Timing Analysis of Java**

The model derivation process ensures the correctness of the timing model as both the synthesized hardware and the corresponding timing model have been created from the same formal specification ...

### **(PDF) Semi-Automatic Derivation of Timing Models for WCET**

A methodology to derive sound timing models using hardware specifications is described within this thesis. To ease the process of timing model derivation, the methodology is embedded into a sound framework. A key part of this framework are static analyses on hardware specifications.

timing methodology that restores all the good features of classical static timing, hence the title of this paper. Towards this goal, three major contributions are made in this paper: (1) the derivation of a variational delay model based on existing timing characterization methods; (2) a novel spatial correlation model

### **Static Timing: Back to Our Roots - cece.uci.edu**

In this paper we present a new logic gate modeling technique well suited for the basic static timing and functional noise analysis as well as accurate delay noise analysis. Our proposed solution is a non-linear dynamic model of the gate driving port, controlled by both input and output signals.

related to the validation of a model against the original gate-level netlist. Finally, we present results on the application of ILMs and ETMs to ten large customer designs. Prior work in the area of automated timing model generation has focussed on the automatic derivation of block clocking requirements [4] and on the characterization of ...
